

The Roadmap to Calculus

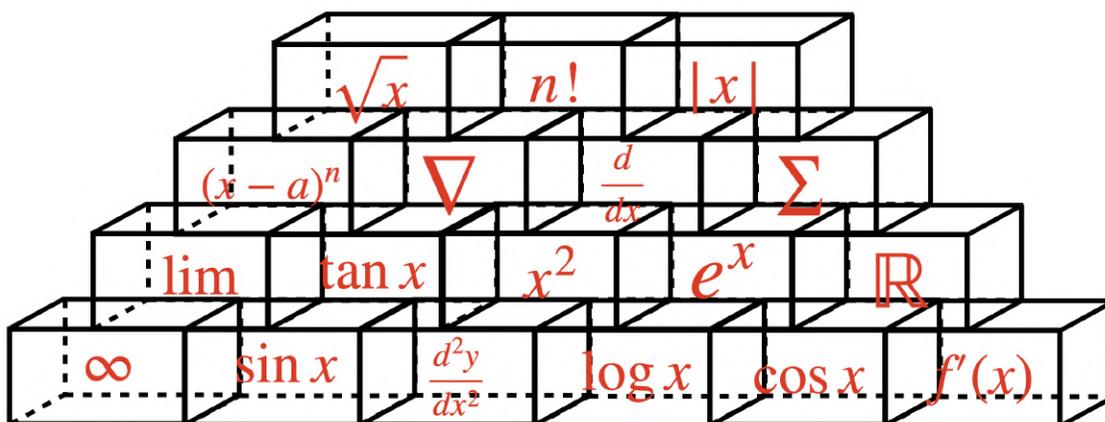

The Roadmap to Master Calculus

by DIBEOS

calculus

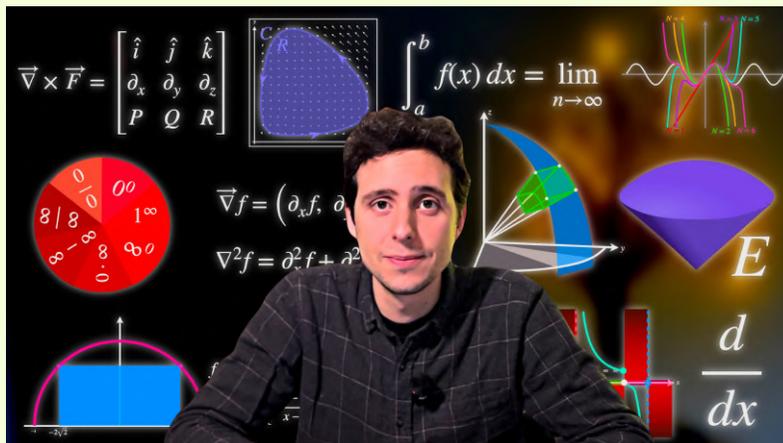

“The calculus was the first achievement of modern mathematics and it is difficult to overestimate its importance. I think it defines more unequivocally than anything else the inception of modern mathematics; and the system of mathematical analysis, which is its logical development, still constitutes the greatest technical advance in exact thinking.” – John von Neumann

Contents

Introduction	4
1. Language	7
(a) Algebra	8
(b) Functions	13
(c) Trigonometry	22
EXERCISE 1	27
2. Change	40
(a) Limits	41
(b) Derivatives	53
(c) Applications of Derivatives	60
EXERCISE 2	61
3. Accumulation	78
(a) Integrals	85
EXERCISE 3	94
(b) Applications of Integrals .	96
(c) Sequences & Series	99
EXERCISE 4	102
4. Flow	107
(a) Vectors & Geometry ...	110
(b) Partial Derivatives	117
(c) Multiple Integrals	121
(d) Vector Calculus	122
EXERCISE 5	126
Summary	135

This PDF is a deeper look at the material discussed in the following YouTube video:

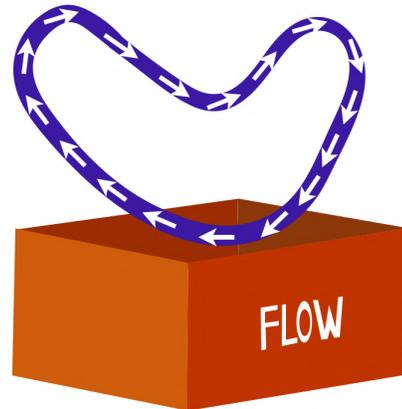

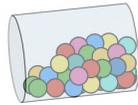

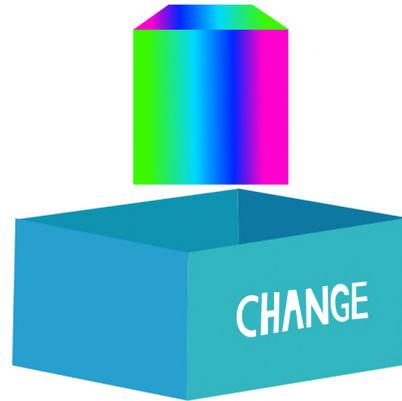

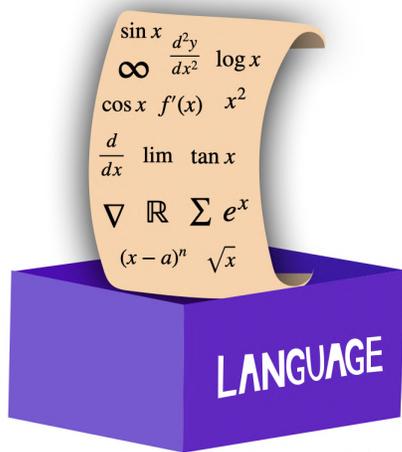

The Roadmap to Master Calculus.

We highly recommend watching the video first to get a basic understanding, and then reading this PDF.

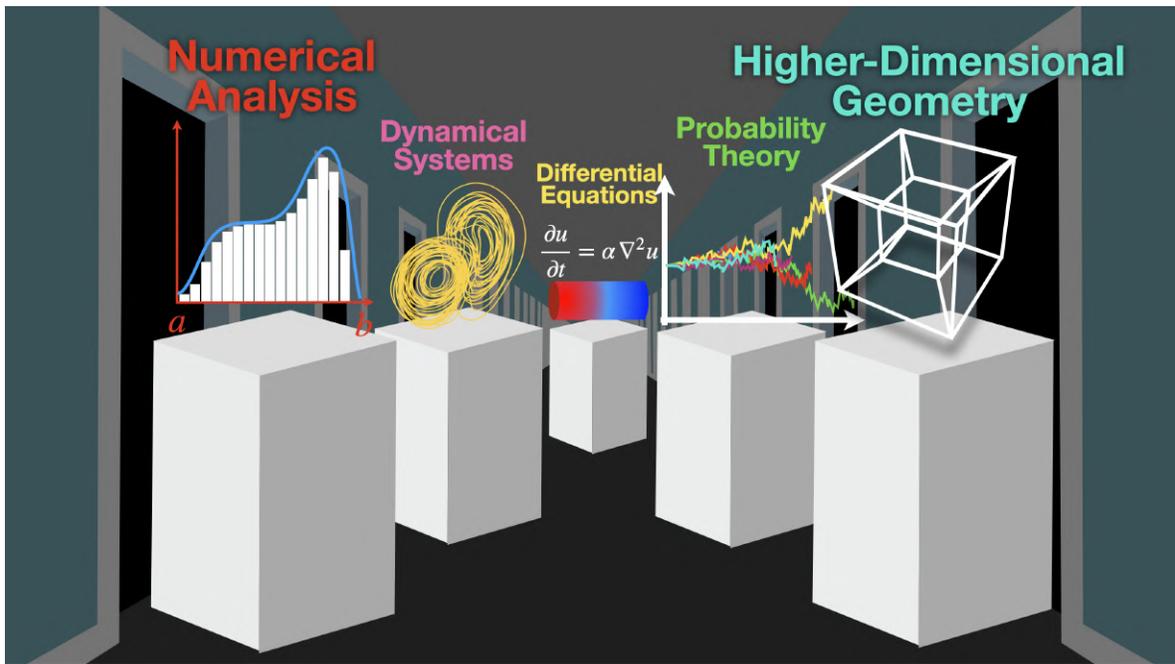

Introduction

Your roadmap to master Calculus can be boiled down to understanding 4 concepts:

1. Language
2. Change
3. Accumulation
4. Flow

Learning these concepts will open many interesting doors for you, like the world of **Differential Equations**, **Dynamical Systems**, **Probability Theory**, **Numerical Analysis**, **Higher-Dimensional Geometry**, and more.

Even though this document does not cover all concepts in Calculus (which would require an entire book, to be honest), it will give you a very good overview of what you need to learn in order to master the subject.

Summary

<p>Language</p> <p>Algebra: equations, systems of equations, inequalities, systems of inequalities (linear, quadratic, rational, exponential and logarithmic).</p> <p>Functions: domain, image and sketch graphs of functions (polynomial, rational, exponential, logarithmic, piecewise functions).</p> <p>Trigonometry: unit circle in radians, the main functions (sin, cos, tan), trigonometric identities, and solving trigonometric equations.</p>	<p>Change</p> <p>Limits: concept of a limit, the 7 indeterminate forms and solving limits.</p> <p>Derivatives: concept of a derivative, definition of a derivative via limit, power rule, product rule, quotient rule, chain rule.</p> <p>Applications of Derivatives: optimization problems, sketching graphs of functions, linear approximations, Mean Value Theorem.</p>
<p>Accumulation</p> <p>Integrals: indefinite integrals, definite integrals, integration techniques (substitution, integration by parts, trigonometric integrals, trigonometric substitution, partial fractions), Riemann sums and Fundamental Theorem of Calculus.</p> <p>Applications of Integrals: areas between curves, arc lengths, surface areas, work in physics.</p> <p>Sequences & Series: convergence vs divergence, ratio test, comparison test, alternating series, power series, Taylor series.</p>	<p>Flow</p> <p>Vectors & Geometry: 3D coordinate system, dot product, cross product, lines and planes.</p> <p>Partial Derivatives: functions of multiple variables and their derivatives, gradient, directional derivatives, tangent planes and optimization with constraints (Lagrange multipliers).</p> <p>Multiple Integrals: double integrals, triple integrals, polar coordinates, cylindrical coordinates and spherical coordinates.</p> <p>Vector Calculus: vector fields, line integrals, surface integrals, Green's Theorem, Stokes' Theorem and Divergence Theorem.</p>
